Exploring Climate Solutions Webinar Series

Brought to you by the Governor's Council on Climate Change (GC3)

The GC3'S **Exploring Climate Solutions** webinar series explores innovative and successful climate change solutions across Connecticut and the nation. The series provides you with first-hand accounts of high-profile municipal climate programs, climate initiatives in the corporate world, greenhouse gas reporting frameworks, statewide sustainability programs, materials management strategies, and low-carbon fuel initiatives.

In our upcoming **March 2nd lunchtime webinar**, join us to learn about leading strategies for reducing greenhouse gas (GHG) emissions by improving the way you manage and use materials. The EPA's 2009 report, [Opportunities to Reduce Greenhouse Gas Emissions through Materials and Land Management Practices](#), shows that approximately 42 percent of U.S. greenhouse gas emissions are associated with the energy used to produce, process, transport, and dispose of the food we eat and the goods we use. This webinar will look at opportunities to reduce GHG emissions by conserving resources and reducing waste.

Webinar participants will learn about best practices on sustainable materials management from Shannon Davis, co-leader of the [West Coast Climate and Materials Management Forum](#) and Kristen Brown, Vice President of [Waste Zero](#). Both organizations have developed innovative strategies and partnerships to mitigate greenhouse gas emissions through materials management planning.

Please join us to learn more about this innovative initiative by registering [here](#)
